BudgetBuddy – Personal Expense Tracker

Proposed Django Website / System Concept

1. Website / System Name

BudgetBuddy – Personal Expense Tracker

2. Purpose

BudgetBuddy is a simple web-based system that helps users record and manage their daily expenses. It allows users to keep track of where their money goes and organize expenses by category.

3. Target Users

• Students – track daily allowance and spending.

• Employees – monitor personal expenses.

• Individuals – manage their daily or monthly budget.

4. Main Record / Data

The main record is an Expense. The system will store information about each expense, such as the amount, category, date, and description.

5. CRUD Operations

Operation	**Description**
Create	Add a new expense
Read	View recorded expenses
Update	Edit expense information
Delete	Remove an expense record

Create: Add expense amount, select a category, enter a description, and select the date.

Read: View all expenses, view expense details, view expenses by category, and view total expenses.

Update: Edit the amount, change the category, edit the description, or change the date.

Delete: Remove incorrect or unnecessary expense records.

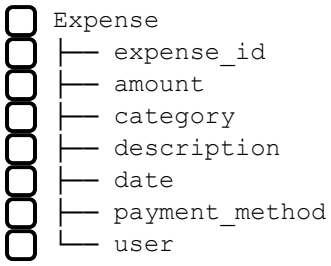

6. Fields

#	**Field**
1	Expense ID
2	Amount
3	Category
4	Description
5	Date
6	Payment Method
7	User

Example Categories

Food • Transportation • School • Entertainment • Shopping • Other

Simple Django Model Concept

Why This Is a Good Choice

BudgetBuddy is easy to develop in Django because the main data is simple and the CRUD operations are clear. The system can later be expanded with a monthly budget, expense summary, charts, and a dashboard.
